LeetCode Guardian (2554, top 0.1%) | **Codeforces Expert (1849)** | IIT Bhilai CSE | AWS Certified

EDUCATION

Indian Institute of Technology, Bhilai
Bachelor of Technology in Computer Science and Engineering

2021 – 2025
CGPA: 8.78 / 10

EXPERIENCE

Publicis Sapient June 2025 – Present
Software Development Engineer · Java, Spring Boot, AWS
Gurugram, India

- Developed Java Spring Boot microservices for a high-traffic e-commerce platform, building and maintaining RESTful APIs across the full delivery lifecycle in an agile team.
- Reduced average API response time by **25%** on read-heavy product endpoints by introducing a Redis + in-memory multi-level caching layer and rewriting inefficient SQL queries to remove redundant fetch round-trips.
- Integrated CloudFront CDN with cache-control policies for static assets and images, cutting measured page load time by **20%**.

PROJECTS

DistKV | *Distributed Key-Value Store* | *Go, Raft Consensus, Custom TCP* [GitHub](#)

- Architected a distributed key-value store implementing the Raft consensus protocol from scratch: randomised-timeout leader election, log replication and heartbeat-based failure detection.
- Designed a custom binary protocol over raw TCP for client-to-cluster communication, bypassing HTTP overhead; achieved read p99 of **184 µs** at 10K ops/s and **903 µs** at 100K ops/s.
- Enforced quorum-based log commits to handle split-brain and network partition scenarios; sustained **47K ops/s** at zero error rate under full Raft quorum; cluster elects a new leader and resumes writes within seconds of a node failure.

CodeArena | *Online Judge* | *Java Spring Boot, React, Kafka/SQS, Docker, Redis* [GitHub](#) | [Live](#)

- Built a two-service async execution pipeline: a submission microservice enqueues code-run jobs onto SQS/Kafka; a stateless worker fleet consumes jobs, runs user code in isolated Docker containers with CPU and memory cgroup limits, and publishes verdicts via Redis pub/sub.
- Sandboxed execution engine prevents cross-submission interference and resource exhaustion; architecture designed to scale horizontally for **10,000+ concurrent users**.
- Integrated an AI assistant via LLM APIs to deliver context-aware debugging hints and time/space complexity analysis inline with every verdict.

Drive | *Cloud-Native Storage* | *Python, FastAPI, React, MongoDB, AWS S3* [GitHub](#) | [Live](#)

- Engineered a hierarchical file system using recursive MongoDB aggregation pipelines and pointer-based document structures, reducing metadata retrieval latency by **80%** over full-collection scans.
- Implemented S3 Presigned URL transfers for direct client-to-cloud uploads/downloads, bypassing the application server entirely and eliminating a throughput bottleneck.

TECHNICAL SKILLS

Languages: Java, Go, Python, C/C++, JavaScript/TypeScript, SQL
Frameworks: Spring Boot, Gin, FastAPI, React.js, Node.js/Express, LangChain
Databases & Messaging: PostgreSQL, MongoDB, Redis, Apache Kafka, AWS SQS
Cloud & DevOps: AWS (EC2, EKS, S3, RDS, CloudFront), Docker, Kubernetes, Jenkins, CI/CD Pipelines, Git

ACHIEVEMENTS AND CERTIFICATIONS

- LeetCode Guardian** (Peak Rating: **2554**, top 0.1%) — Global Rank **128 / 28,300** in Weekly Contest 454. [Profile](#)
- Codeforces Expert** (Max Rating: **1849**). [Profile](#)
- Rank **1,534 / 22,494** in **Meta Hacker Cup 2024** Round 1.
- Rookie of the Batch** at Publicis Sapient — top performer among the entire graduate intake cohort.
- Certified **AWS Cloud Practitioner** (CLF-C02).
- Top 1% in IIT JEE 2021 among ~1.2 million candidates.
